The Honorable John Thune
Chairman, Senate Commerce, Science, and
Transportation Committee
254 Russell Senate Office Building
Washington, DC, 20510

The Honorable Bill Nelson
Ranking Member, Senate Commerce, Science,
and Transportation Committee
716 Hart Senate Office Building
Washington, DC, 20510

Dear Chairman Thune and Ranking Member Nelson,

The undersigned organizations write to express deep concerns about the impact of Administration regulations and legislative initiatives related to government travel on the science and engineering enterprise and the pace of innovation. Collectively, our organizations and institutions represent and support millions of scientists, engineers, and mathematicians—including many who work for the federal government directly or as contractors—across a broad spectrum of disciplines.

A recent [GAO report](#) on the impact of federal conference and travel policies on science and technology—and [subsequent reports](#) in *The Washington Post*—has highlighted the stark reduction in government employee participation in conferences; the risks to U.S. leadership in science and engineering; and the increased administrative burden of these policies. We urge you to work with federal agencies and the scientific community to ensure that any further legislative action does not place additional red tape and administrative burdens on the U.S. science and engineering enterprise.

Current policies are reducing government scientists' and engineers' participation in scientific and technical conferences while the administrative cost of overseeing these activities has *increased* significantly. In particular, government scientists and engineers often wait many months to receive approval to participate in conferences, sometimes obtaining it just days before a conference. The bureaucratic delays prevent many government scientists and engineers from accepting key speaking roles and lead to increased travel costs associated with last-minute bookings. Further, the reductions in participation threaten the quality of research at federal labs, the stature of U.S. science on the global stage, and agencies' abilities to recruit and retain the best and brightest researchers in their fields.

The formal and informal interactions that take place at scientific and technical conferences are a crucial part of the innovation process and help to maximize the return on taxpayer investment in scientific research. Whether providing rapid pathways for bringing scientific advances to bear on societal needs, spurring new collaborations that promote exciting interdisciplinary investigations, or simply providing cost-effective venues for scientific program management and oversight, scientific conferences are crucial to the efficient functioning of our innovation ecosystem and maximizing the return on federal investments in science.

We stand ready to work with you and officials throughout the government to find a solution that ensures transparency and accountability in federal spending without impacting scientific progress and innovation.

Sincerely,
